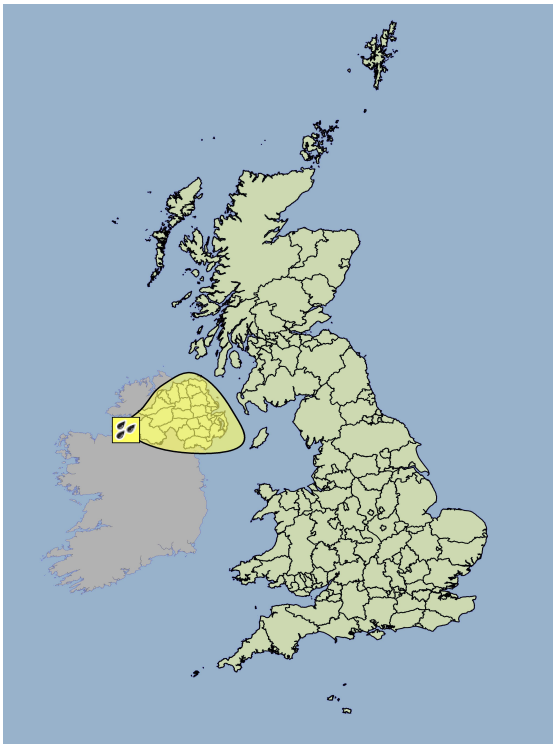
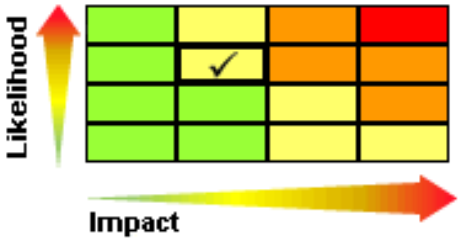
National Severe Weather Warning Service





Chief Forecasters Assessment
Another deep low pressure system is crossing the UK, running northeastwards across western and northern parts during Friday and into Saturday, before clearing to the northeast. The associated frontal systems will bring spells of heavy and persistent rain as well as the risk of snow on the northern flank of the system. Further strong winds are also expected with this system.

Whilst the snow may bring impacts, warmer air is tied up within the system and much of the snow will melt. With saturated ground conditions across much of Northern Ireland this may lead to localised flooding.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **12:00 on Fri, 14th Feb 2014** until **08:00 on Sat, 15th Feb 2014**

Further spells of rain are expected overnight, possibly heavy and prolonged at times and may give further accumulations of up to 20 mm across the high ground of Antrim and Down in particular. Any snow that has fallen on higher ground will also melt and with saturated ground conditions the added water on the ground may lead to localised flooding issues.

The public should be aware of the potential for localised flooding on Friday evening and Saturday morning due to the wet conditions. This update extends the risk of heavy rain into Saturday morning.
